Overview

Blockchain and its protocols have been rebranding how we interact with gaming utilities, and the introduction of NFTs has opened several doors toward following an equity-centric gaming model.

Despite being attractive and entertaining, our traditional gaming methods haven't gained attention as it's considered a waste of time regarding rewards.

Would it be fascinating if I told you that you could earn while exercising and gaming? Well, you read it right.

Introducing **HyperMove**, the world's first blockchain-powered mobile App with built-in integration of M2E & P2E that allows users to enjoy & earn in a decentralized environment.

Built on the BSC network, We are the first notable cryptocurrency project to develop and implement long-term, functional earning mechanisms based on various possibilities for people to pick from, even within the same ecosystem.

Use Cases

Users will earn IN-APP cryptocurrency by simply moving, jogging, walking, running, and swimming indoors and outdoors, which can either be donated to numerous charity organizations or cashed out for profit.

HyperMove's earn capability intends to incentivize tens of millions of people around the globe toward a healthier lifestyle, introducing them to how revolutionary the web3 can and will be, all while relying on its social elements and simple UI to develop a stable platform encouraging user-generated Web 3.0 content.

On HyperMove, the more a person wins, the higher their in-platform rank rises, just like in real-life competitive sports leaderboards. As a player's rating increases, they can enter more lucrative tournaments with more outstanding entry fees and prize pools.

Our Mission

HyperMove has a primary mission – To integrate P2E & M2E into a single app where users would have the freedom to earn as they move and as they play exciting games.

HyperMove intends to promote mental and physical health by providing a platform capable of encouraging users to exercise, improve their fitness and play games while earning cryptocurrencies as passive rewards.

Covid-19 has crippled the world's economy by introducing lockdowns, mental & physical health instability, and an increased unemployment rate.

To tackle these uprising problems, HyperMove has developed this revolutionizing idea to introduce a better, stable, and healthier way to earn all by keeping a user mentally and physically fit.

With HyperMove, we intend to create a revolution within the gaming industry by integrating M2E & P2E under the same roof. We've been working relentlessly and expect to share much exciting news with you soon." –**The Founder of HyperMove.**

Ecosystem

HyperMove's ecosystem contains a series of features, along with their benefits, to allow everyone to earn incentives while having fun, without any restriction.

Move-to-Earn

The HyperMove ecosystem includes features and associated perks that allow anyone to earn rewards while having fun.

HyperMove is a Web 3 Lifestyle App that allows players to earn money while walking, racing, and touring outside. Users can earn \$hmove tokens by using our App already available on both Playstore and App store.

This is a way to earn meaningful incentives for doing things like moving about, and it's been adopted by several other apps that reward users for their activity.

The HyperMove software creates rewards through digital tokens based on the blockchain. For playing online games, users are rewarded with native utility tokens. By walking and running with our App, users may earn \$hmove tokens.

Build-to-Earn

HyperMove allows users to create and host their games on the platform and receive recurring cash after they have been reviewed.

HyperCasual Games

Hypermove offers a wide range of casual games in which players can earn \$Hmove tokens and NFTs.

Utilizing the HyperMove app, users can play exciting games and earn cryptocurrencies and In-game Assets in the form of NFT, which can be further traded/exchanged/sold for real-world money.

NFT Marketplace and staking

NFTs

The HyperMove marketplace is where gamers may rent, lease, and trade their NFTs Sneakers, Badges, and NFTs Gems.

Users will also be able to stake their NFT assets inside the ecosystem to make significant passive revenue in the form of \$Hmoves.

Community-Driven DAO

HyperMove will function as a Decentralized Autonomous Organization while giving our NFT holders the ability to participate in every decision-making process of the ecosystem fully.

Global leaderboard

HyperMove will allow gamers to be known through our worldwide leader board and increase their social profile, as well as additional incentives for top players.

Player-to-Player marketplace

Users can exchange their platform genesis NFT assets between player-to-player marketplaces using HyperMove.

Road Map

Q2 of 2022

- The Concept and Idea is born
- Research and Study
- Economy in Game Design
- Move and Earn Ideal Phase
- List on CoinGecko
- List on CoinMarketCap

Q4 of 2022

- Game-Fi: PVP
- Social-Fi Element and Chat Features
- Communities Event
- HyperMove V2

Q3 of 2022

- Social Marketing Campaign and Referral Program
- Community Building
- Large Marketing Push
- Marketplace
- Mint and Renting NTFs
- Partnership with Shoe Brands
